

Guide to Optional Extras and Accessories

Accessories & Extras

Underwater Lighting

For the ultimate luxury in night-time bathing indoors or outdoors, why not illuminate your pool with our range of underwater lights to create an extra special atmosphere. Alternatively, why not add fibre optic lighting to enhance your swimming pool environment.

Pool Underlay

Swimming pool underlay has all the advantages you would expect when carpeting your own home. In other words, it offers the difference between hard concrete or a soft cushion. Swimming pool underlay will protect your pool liner from uneven screed and will also insulate your pool from underground heat loss.

**Highly
Recommended**

Fibre Optic Lighting

Fibre optics offer simple installation and multiple lighting from one source. All aspects of lighting, architecture, landscapes, pools and spas can benefit from the enhanced appearance and performance of fibre optic lighting. Fibre Optic lighting is a highly energy efficient and cost effective alternative to traditional lighting as it uses only one light source for multiple points of lights, the cables emit no heat and no ultra-violet radiation. They are clear, flexible, resistant to cold and virtually unbreakable.

To create a stunning affect for a pool, combine an underwater perimeter lighting system with an oasis waterfall. The six-colour choices can either be set on one colour, or cycle through each colour at a chosen speed plus a remote control is available for effortless operation. The illumination system is suitable for both new and existing pools and will transform the water to an extraordinary dimension.

Coping Stones

Bull nosed, naturally coloured reconstituted edging stones to surround your swimming pool just perfectly. The larger 12" coping completes your pool installation to give it that professional finishing touch. Alternative finished edging stones in natural stone are also available.

Coverstar - Automatic Safety Cover

A safety cover is considered the number one safety feature you can have on your pool. Coverstar systems provide safety and peace of mind. They seal the entrance to the pool with reinforced fabrics and extensively tested automatic mechanisms.

Roldeck Safety Cover

This cover consists of taut PVC slats which float on the water. The Roldeck is opened or closed automatically, the slats are coiled off onto a concealed stainless steel spindle driven by an electric motor.

Pool Steps

These beautiful Roman End steps offer a practical alternative to traditional pool steps. They not only enhance the appearance of your pool but offer easy access to the pool for both adults and children.

They are now available as either traditional Roman End, square step, or corner step units.

Counter Current System

If you take your swimming seriously and you want your pool to be more exciting and invigorating, then fit a counter-current system. A counter-current ensures that your exercise will be more physically challenging with this stimulating system. The current is so strong that you can swim in one direction without even turning and offers the perfect solution for those smaller pools, it also gives you a hydrotherapy massage to refresh you from top to toe.

For Indoor Pools Only

Draineasy

Draineasy offers an effective way of draining excess water from around your swimming pool, spa and shower area. It's modular sections make it relatively easy to install and simple to clean with it's clever removable lid.

Dehumidifiers

High levels of humidity which left unchallenged can be a major problem in an indoor pool environment. Dehumidifiers will minimise the need for costly air extraction. They will recirculate the pool hall air whilst simultaneously removing the moisture and delivering warm, dry air back into your pool hall.

Variheat

Control of an indoor pool environment can require several different functions which are inter-related. Pool hall heating, humidity control, pool water heating, energy recovery and maintenance of pool air quality, all play a vital role. A Variheat offers the ideal solution by controlling all of these factors in one purpose built system.

Note: A primary heat source is required for this unit.

Dri-Dek Pool Matting

Dri-Dek is the perfect solution for showers, steam rooms, dressing rooms, locker rooms, or any place that gets wet. Why? because Dri-Dek's textured surface not only drains water - it's patented design lifts you above wet floors too.
