

For the pool & spa professional

No More Metal

New Pools: 50ml for every 5,000 litres of pool water.
Maintenance dose of 500mls per 50,000 litres of pool water
1 Litre bottles packed 6 to a carton

What is it?

Lo-Chlor No More Metal is a superior metal sequestriant designed to remove dissolved metals from pools, spas and hot tubs. A must for all stain removal solutions. No More Metal will also prevent scale build up and is ideal for new pools.

Who needs it?

- Any pool owner who has metal or iron staining in their pool.
- Any owner of a newly filled pool.

- Every serviceman should carry it in their vehicle. By doing so, they will, in many situations, be able to assist removal of metals from a clients pool whilst making a regular service call and, in so doing, gain the gratitude and loyalty of the client.

What does it do?

- No More Metal is designed to sequester (isolate and hold in solution) metals in the water and then remove them from the pool by filtration.
- It is also an aid to prevention of scale as it helps to reduce calcium hardness.

What advantages does it have over other similar products?

- Very easy and economical to use.
- It may be used in all types of pool finishes.

Professional tips:

- Use No More Metal on start up of new and re-surfaced pools.
- Pools should not be shock treated within 48 hours of the addition of No More Metal.
- Backwashing is also recommended before the initial shock treatment after using No More Metal.
- No More Metal must always be added immediately after using any of the Lo-Chlor range of stain removers to prevent re-staining.
- The product should then be added again at regular intervals to prevent the deposition of new stains and also help with older ones.
- Occasionally, stain removal may cause the water to cloud. Use a Lo-Chlor Miraclear Cube or Miraclear Liquid Pool Clarifier and regular filtration if cloudy conditions persist.

N.B. In cases of using the product after severe metal staining double the maintenance dose.
