Depth (m)	0,48	0,48	0,48
Weight (kg)***	420	560	610

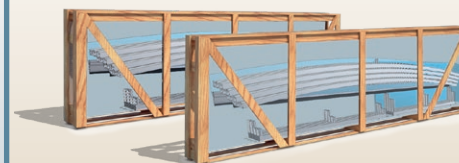

SIDE-MOUNTED SLIDING DOOR

The side-mounted sliding door can be installed in 2 positions on the large segment

RAILS

The Extra Flat H box is produced with rails on one side only (to be installed left or right) – a unique solution for DIY enclosures

TECHNICAL FEATURES

RAILS

The 12 mm super flat rails that are secured to the ground ensure easy sliding of the segments as well as the steel wind hooks provide permanent wind and storm protection.

SEGMENT RUBBER

High quality silicone rubber provides great insulation between the segments. It only touches the segments when they are in a closed position this way avoiding any kind of damages resulting from the segments' movements.

ROUNDED PROFILES

The enclosure parts are produced of elegant, rounded anodized aluminum alloy profiles developed and patented by Aquacomet.

PLASTIC END CAPS

The horizontal profiles, which collect all the arches, include aesthetic plastic molded end caps that are also designed to accommodate the special arrest system.

FRONT AND END WALLS

AQ box enclosures - except A5 - come with removable front and back walls. Both are removable in one piece. The front and back walls of model A5 are sliding with 100 mm rubber.

The box enclosures have a side-mounted sliding door, which can be installed in 2 positions.

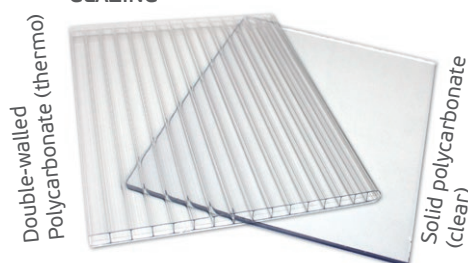

GLAZING

Both types of AQ box enclosures' glazing panels, 6mm double-walled Polycarbonate or 3 mm solid PC, are UV protected on both sides.

SEGMENT POSITIONING

Aquacomet developed special arrest system is installed in the AQ box enclosures that ensures child safety and easy locking of the segments when they are out of use.

GLAZING

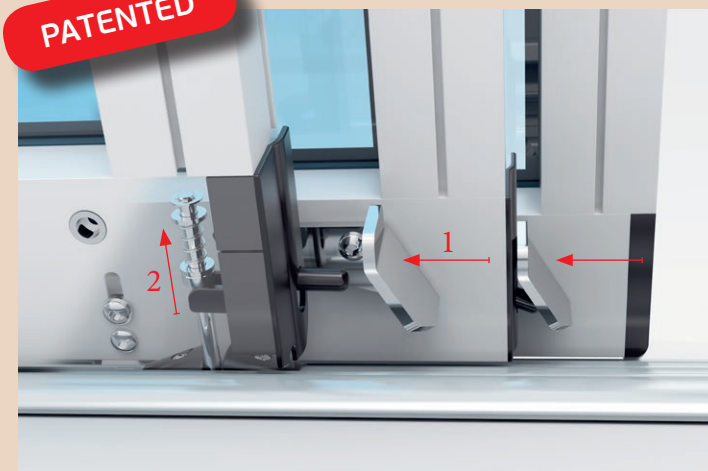

CHILD SAFETY – SEGMENT LOCKING

WE EQUIP OUR AQ BOX ENCLOSURES WITH A STATE-OF-ART, VERY SAFE, AUTOMATIC ORIENTING-LOCKING SYSTEM.

This multi functional system was designed and produced by Aquacomet therefore it is patented. The innovative solution provides fully automatic positioning on the rails as well as ensures childproof locking.
