

Swimming Pool Plant Room Flood Protection 24 Hours A Day 365 Days A Year

LEAK DETECTION

Pumps and Filtration system automatically shut down to prevent flood damage from pool water

CONSTANT MONITOR

24 Hour a day
Year-round monitoring

MOBILE ALERTS

Alerts and status updates sent straight to your mobile and your service company

The One Of A Kind System Protects Your Plant Room

The Certikin Plant Room Shield detects leaks within the swimming pool plant room helping to prevent major flood damage.

The instant that the Plant Room Shield detects a leak, it will cut power to the circulation pump helping to prevent damage that would have been caused by flooding. At the same time the system will alert you or your pool maintenance company that a problem has been detected and that action has been taken by the system.

This can avoid unnecessary costs and distress by reducing or preventing damage to your property plant room, connecting rooms or adjoining areas that would be damaged by large volumes of water.

Plant Room Shield is designed to lower the risk of plant room flooding resulting from swimming pool related plant room leaks. It is not a replacement for diligence or regular inspection, maintenance and correct upkeep of equipment and systems nor will it protect against damage due to water ingress or escape.

Mobile connectivity requires an operational SIM card. 7 day card included, beyond which top ups or replacements are required.
