

EZ Glide by EZ Cover™
Enhance Your Spa Experience

EZ Glide by EZ Cover™

EZ Glide

The EZ Glide is a premium, 24V, DC motorised cover system designed for pools, spas, and swim spas up to 3.2 m wide and 12 m long. Operated at the touch of a button, the cover glides smoothly along anodised aluminium guide tracks, offering effortless use and a sleek, modern finish. Its insulated, interlocking slats provide excellent heat retention, energy efficiency, and enhanced safety. The EZ Glide is long-lasting, low-maintenance, and environmentally friendly. Available in white or brown, the system's clean design integrates beautifully with any spa, swim spa or pool setting.

Low Mount Installation

The EZ Glide motor enclosure is available in two configurations – Hi Mount, fixed above the finished level of the pool, spa, or swim spa, and Low Mount for a more discreet installation. Built from box-section stainless steel, the enclosure provides exceptional durability and strength.

The insulated aluminium slats provide a weight-bearing capacity of up to 20 kg/m², offering both durability and thermal efficiency. For applications requiring extra strength, reinforced aluminium slats are available with a load capacity of up to 40 kg/m² (non-insulated).

Upgraded cladded finish

Optional Extras

EZ Glide Enclosure Chassis – can be supplied to support the motor enclosure (see installation guide for details).

External Cladding – optional finish to complement your surroundings, fitted over the stainless-steel enclosure.

Drainage Tray and Waste – provides effective water management and easy maintenance.

Power Requirement

230V Single phase 13 AMP supply
