STARVER® X

Starver® X is a safe and effective superior strength phosphate remover for swimming pools. One litre of Starver® X will remove up to 6000 ppb (6ppm) of phosphates from a 50,000 litre swimming pool. Starver® X is a curative solution designed to remove high phosphate levels.

GENERAL INSTRUCTIONS

- 1. If algae are present, it is recommended you treat this algae first with one of the Lo-Chlor Algaecides prior to beginning phosphate removal.
- **2.** Clean or backwash filter and ensure pool water is balanced.
- **3.** Shake the container well before use.
- **4.** Slowly add the required amount of Starver® X to the pool water directly in front of the skimmer box inlet.
- **5.** It is recommended that immediately following the addition of Starver® X, place one Lo-Chlor Miraclear Pool Clarifier Cube directly into the pump basket (follow package directions). The addition of a Miraclear Pool Clarifier Cube will reduce any cloudiness associated with phosphate removal.
- **6.** Run filtration system continuously for 24 hours. Check filter pressure regularly and backwash, if necessary.
- **7.** Test phosphate level of pool water at least 24 hours after treatment.
- **8.** If necessary, repeat additional dosage of Starver® X at weekly intervals until phosphate level is within acceptable range. For faster results, Starver® X dosage can be repeated at 24-hour intervals.

DOSE RATES

POOL VOLUME:		DOSE:	
GALLONS:	LITRES:	LOWER BY UP	LOWER BY
		TO 6ppm:	1ppm:
5,500	25,000	500ml	84ml
11,000	50,000	1000ml	168ml
16,500	75,000	1500ml	252ml

PROFESSIONAL TIPS:

After treatment using Starver® X regularly check phosphate levels in your pool. For ongoing control and treatment of phosphates use Lo-Chlor Starver®

REMEMBER NO PHOSPHATE = NO ALGAE.
